

AutoCAD Electrical® eXtender: DWF Project Surfer

Overview:

Whilst AutoCAD Electrical creates DWF files, the DWF files are effectively unintelligent and the DWF file is purely used for viewing and for marking up.

The DWF Project Surfer automatically creates the intelligent links between signal and destination wires, cross-referencing between parent and child components and also cross-referencing between schematic, terminal diagrams and assembly drawings on a AutoCAD Electrical project basis as either a single or multi-sheet DWF(s).

Benefits

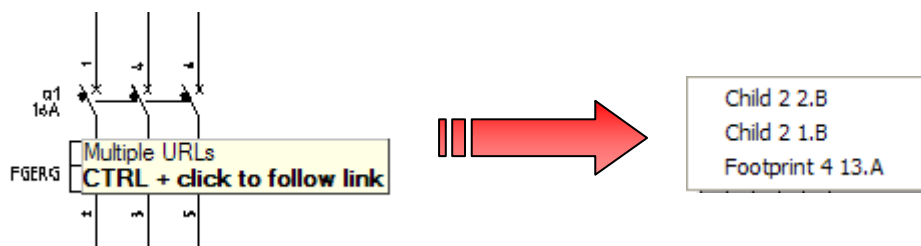

Easy to learn & use, ensuring a rapid return on investment.

It enables both internal staff and customers to navigate intelligently around designs in the popular DWF file format without the requirement of an AutoCAD Electrical.

Features

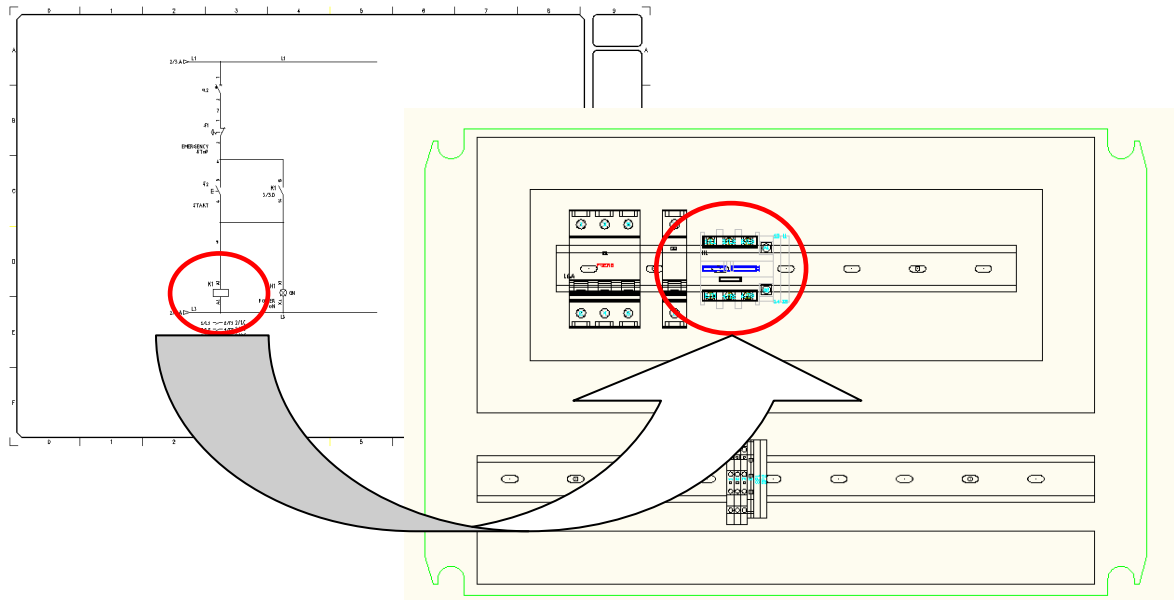

- DWF Hyperlinks will be automatically created linking parent to child schematic devices, signal and destination wires, and also cross-referencing between schematic, terminal diagrams and assembly drawings.
- Automatically creates a single (multi-sheet) DWF for the entire AutoCAD Electrical project or for selected drawings within the project
- Automatically creates individual DWF's for each drawing within the entire project or for selected drawings within the project.

If you open the resulting published DWF (s) using Autodesk Design Review, a Vista PC or XP(sp3) PC, you will see hyperlinks when you hover over schematic parents, schematic child, footprints and graphical terminal strips.

AutoCAD Electrical® eXtender: DWF Project Surfer

This will then show you a list of available surfable components enabling either internal staff or customers to easily navigate around your control drawings. Selecting the link on the schematic DWF will take you, as an example, automatically to where the same component is located in the assembly drawings!

Technical requirements

AutoCAD Electrical 2008, 2009 or 2010

System Requirements

Please refer to the Autodesk web site for the system specification:
